SUMMARY

Front-end developer specializing in Next.js, React and TypeScript, with production work delivered as the sole developer on paying client projects. Comfortable owning a project end to end — interface, database, authentication and deployment. A background in graphic design means I read a design file correctly the first time and can defend the details that usually get lost in handoff. Spanish native, English C1.

EXPERIENCE

Freelance Web & Software Developer — Self-employed

Sep 2023 – Present · San Miguel de Tucumán, Argentina

Corralón Artesan — company website and product catalog [corralonartesan.com](#)

- Sole developer: owned architecture, implementation, deployment to Vercel on a custom domain, and ongoing maintenance.
- Built a responsive catalog of 50+ products across nested categories and subcategories, so customers can locate a product and its price without contacting the store.
- Applied on-page SEO and Core Web Vitals optimization; organic traffic has grown to a peak of ~187 visits per month.

Billing & inventory desktop application — in progress

- Desktop system for a retail client covering invoicing, customer records and stock control: invoice entry, product and price management, inventory tracking and commercial data administration.
- Designed the relational schema and the WinForms interface; built to be resold to other small businesses with the same workflow.

SELECTED PROJECTS

Showboxd — full-stack social platform, built solo [showboxd.vercel.app](#)

- Platform for logging and rating TV shows: authentication, public profiles, reviews, comments, likes, saves, search and filtering.
- Integrates the TMDB API and persists every user interaction in Supabase (PostgreSQL). Tested with real users.

#Next.js #TypeScript #Supabase #PostgreSQL #Tailwind CSS

Vinimusic — e-commerce interface [vinimusic.netlify.app](#)

- Vinyl record storefront with an authentication flow and global cart state, built to carry one committed visual direction through to a working interface.

EDUCATION

Technical Degree in Programming — UTN, Facultad Regional Tucumán

2025 – Present · 2nd year · honors average

- Management systems with database persistence in console and WinForms, including one connected to a remote MySQL server with per-branch product modelling and typed sub-tables.
- Services built with Express.js and Prisma ORM consuming external APIs; Scrum with Trello in a team.
